Type: ROUTINE INSPECTION

Date: May-06-2015

3.80 (a)

PRIMARY ENCLOSURES.

*** There is a long crack in the glass of the orangutan enclosure #3, approximately 34" in length. The integrity of the glass is compromised and can potentially lead to injury or escape.

Primary enclosures should be constructed of a suitable material as appropriate for the species contained therein to prevent escape or injury. The glass must be replaced to ensure the enclosure is structurally sound to contain the animals. Correct by May 22, 2015

NOTE: A work order has been submitted and replacement of the glass is scheduled.

The exit briefing was conducted with the facility representative.

3.131 (d)

SANITATION.

***Mice are present in the gorilla and orangutan enclosures in the Ape House as well as in animal enclosures within the Small Mammal House. Mice have been an ongoing problem in these two buildings and measures have been taken to decrease the population. However, over time those measures have not been effective in controlling the population. An effective and safe program for controlling mammalian pests should be in place. An effective pest control program for mice must be established and maintained to protect the health of the animals housed within the buildings. Correct by June 30, 2016.

NOTE: A comprehensive pest control program for the Ape House and the Small Mammal House has been developed and portions of the plan have been implemented.

The exit briefing was conducted with the facility representative.
